Want to know how many Gallons you have in your tank?? Check out our quick and easy guide!

If you have a 275 gallon tank you will first have to measure how deep it is. If it is 42 inches deep then, stick your measuring stick to the bottom of your tank, pull it out and see where the fuel reaches on your measuring stick. If there are two inches of yard stick covered in fuel then you have 7 gallons of fuel in your tank

**These are approximations of how many gallons in your tanks.
